Database Work Contribution

Pediatric Patient Management and Clinical Database System

Member 1

Core Database Design

- Designed patient, guardian, staff, appointment, and visit tables.
- Added keys, relationships, checks, and soft deletion.
- Verified schema integrity and core clinical connections.

Member 2

Clinical and Dynamic Data

- Designed diagnosis, prescription, lab, and follow-up tables.
- Implemented EAV-style dynamic fields with typed JSON values.
- Added form versions, value history, and audit support.

Member 3

Queries and Optimization

- Prepared synthetic demonstration data for patients and doctors.
- Created views, triggers, procedures, and evaluation queries.
- Added indexes, benchmarks, testing, and documentation.

Shared Work

All members reviewed the final schema, tested relationships, and prepared the project demonstration.
